

We claim:

1. A fluid distribution device, in particular of cosmetic product, of the type comprising:
  - 5 - a bottle adapted to contain the fluid and having a distribution orifice;
  - a decorative case covering the bottle, said case having a body and retaining means adapted to retain the body with respect to the bottle, wherein the retaining means comprise:
    - a collar integral with the decorative case comprising:
      - 10 • an internal passage traversing the collar from one side to the other;
      - an external section inserted tightly in the distribution orifice of the bottle;
    - articulation means connecting the collar to the body.
2. A device as claimed in claim 1, wherein:
  - 15 - the device further comprises shutter means articulated with respect to the body of the bottle so as selectively to close the inner passage of the collar,
    - the body comprises two main portions enclosing the bottle between one another, the shutter means being articulated on one portion and the collar (16) on the other portion.
- 20 3. A device as claimed in claim 1, wherein:
  - the bottle comprises a neck internally incorporating the distribution orifice, said neck also comprising an external rim;
  - the retaining means further comprise a support extending around the neck of the bottle, substantially bearing on the external rim.
- 25 4. A device as claimed in claim 1, wherein:
  - the body comprises two main portions enclosing the bottle between one another, and
    - the two main portions of the decorative case are connected together by a film forming a hinge integral with said main portions of the body,
    - 30 - the decorative case further comprises releasable fastening means adapted to keep the two main portions of the body in contact with one another.
